N1010A FlexDCA Sampling Oscilloscope Software

Keysight's N1010A FlexDCA software runs our DCA family of sampling oscilloscopes (also known as equivalent-time oscilloscopes). A DCA is an instrument that helps visualize and analyze the analog properties of high-speed signals such as those used in wireline telecom and data center links.

While FlexDCA comes installed on DCA-X mainframes, you can also install it on a PC to control a DCA-M or remotely control a DCA-X.

In addition to the N1010A FlexDCA's data acquisition and basic measurement capabilities, Keysight offers a large selection of software tools with powerful capabilities:

- N1010100A R&D package for the FlexDCA sampling oscilloscope software: This package helps R&D engineers who want to characterize their designs and gain more insight into why a signal deviates from the expected performance.

- N1010200A manufacturing package for the FlexDCA sampling oscilloscope software: This package focuses on cost of test in optical transceiver manufacturing applications. Capabilities such as RapidEye and FlexEye enhance measurement speed and flexibility. It includes measurements such as TDECQ.

- N1010300A signal integrity package for the FlexDCA sampling oscilloscope software: This package adds powerful tools to measure impedances, transfer characteristics, and S-parameter calculations to the basic TDR / TDT measurements.
