**Passband up to 300 kHz**  
**Stopband attenuation up to 40 GHz**

### Features

- Use of coaxial feed-through capacitors on input and output
- Single or current-balanced chokes depending on requirement
- Insertion loss to CISPR 17
- Also available with integrated EMP protection

### Installation

Single filters are attached directly to the shielding wall. Larger numbers can be housed in filter cabinets or boxes. Various models and the matching flexible connector fittings are available.

### Mechanical design

The electrical components are incorporated in an RF-tight case of tin-plated sheet steel. Filters are available for 2 or 20 lines and for upright or flat installation on shielding wall.

Model	Installation		Filter selection
B84312C	Upright	Space-saving solution for installing a number of different filters.	B84312C*B (2-line) B84312C*H (20-line)
B84312F	Flat	Low profile and thus advantage especially for just one or a few filters.	B84312F*B (2-line)

**Filter applications**

**Circuit diagrams**

The diagrams each show a circuit of a 2-line filter.  
 In the series of 20-line filters there are 10 of them in each case.

Note on circuit diagrams 2 and 3:

These filters are mounted with current-compensated chokes. Make sure that the forward and re-  
 turn line are routed paired through one filter.
