

Extra compact, flexible and easy-to-use, ER8000 is a high performance, full CISPR 16-1-1 compliant EMI receiver perfect for any conducted and radiated measurement from 9 kHz up to 3 GHz.

A full compliant span as fast as two seconds in band B and as fast as one minute in bands C+D is the result of a state-of-the-art design featuring FFT architecture to optimize measurement speed.

Other technical improvements include an extremely effective front end with efficient preselector, for outstanding performance, and a user port suited for external devices like LISNs and switching boxes for even faster testing times.

The ER8000 also features an internal built-in 16 A LISN (Line Impedance Stabilization Network), so this compact setup can perform conducted emission measurement tests and characterize EUTs quickly and effectively, whether in the design lab during product development or in an EMC laboratory for the certification of EMI measurements. An optional DDA Click Analyzer makes this measurement system more attractive and profitable than ever.

The compact size and rugged yet lightweight design make the ER8000 the perfect solution for in-situ testing.

PMM Emission Suite software (included free of charge) is the ideal companion for this high performance receiver, featuring a full set of user-friendly functions for all EMI applications.

The receiver can be ordered with two different frequency ranges: 9 kHz to 30 MHz (ER8000 opt. 00), or 9 kHz to 3 GHz (ER8000 opt. 01). Users can upgrade from version opt. 00 to version opt. 01 at any time.

EMI Receiver with built-in LISN

SPECIFICATIONS

Frequency range 9 kHz to 30 MHz (Opt.00) 9 kHz to 3 GHz (Opt.01) 1 Hz; 100 Hz above 30 MHz Resolution Frequency accuracy

Spectrum method analysis FFT, size up to 8192, minimum overlap 89%
