# Keep the test queue flowing

In EMC testing, success depends on tools that can help you do more in less time—today and tomorrow. That's why Keysight Technologies, Inc. created the MXE: it's a standards-compliant EMI receiver and diagnostic signal analyzer built on an upgradeable platform. In the lab and on the bench, it provides the accuracy, repeatability, and reliability you need to test with confidence. Equip your team with the MXE, and keep the test queue flowing.

### **Definitions and Conditions**

Specifications describe the performance of parameters covered by the product warranty and apply to the full temperature range of 0 to 55 °C, unless otherwise noted.

95th percentile values indicate the breadth of the population (approx.  $2~\sigma$ ) of performance tolerances expected to be met in 95 percent of the cases with a 95 percent confidence, for any ambient temperature in the range of 20 to 30 °C. In addition to the statistical observations of a sample of instruments, these values include the effects of the uncertainties of external calibration references. These values are not warranted. These values are updated occasionally if a significant change in the statistically observed behavior of production

instruments is observed.

Typical describes additional product performance information that is not covered by the product warranty. It is performance beyond specifications that 80 percent of the units exhibit with a 95 percent confidence level over the temperature range 20 to 30 °C. Typical performance does not include measurement uncertainty.

Nominal values indicate expected performance, or describe product performance that is useful in the application of the product, but are not covered by the product warranty.

The receiver will meet its specifications when:

- It is within its calibration cycle
- Under auto couple control, except when Auto Sweep Time Rules = Accy
- Signal frequencies < 10 MHz, with DC coupling applied
- The receiver has been stored at an ambient temperature within the allowed operating range for at least two hours before being turned on
- The receiver has been turned on at least 30 minutes with Auto Align set to normal, or, if Auto Align is set to off or partial, alignments must have been run recently enough to prevent an Alert message; if the Alert condition is changed from "Time and Temperature" to one of the disabled duration choices, the receiver may fail to meet specifications without informing the user

#### Get more information

This data sheet is a summary of the specifications and conditions which are available in the MXE EMI Receiver Specification Guide (N9038-90010).

For ordering information, refer to the MXE EMI Receiver Configuration Guide (5990-7419EN).

# Frequency and Time Specifications

| Frequency range                            |                                    | DC coupled                                 | AC coupled              |
|--|------------------------------------|--|-------------------------|
| Input 1                                    |                                    | •  |                         |
| - Option 5034                              |                                    | 3 Hz to 3.6 GHz                            | 10 MHz to 3.6 GHz       |
| - Option 508                               |                                    | 3 Hz to 8.4 GHz                            | 10 MHz to 8.4 GHz       |

Analysis bandwidth is the instantaneous bandwidth available around a center frequency over which the input signal can be digitized for further analysis or processing in the time, frequency, or modulation domain.
 Sweep points = 101.

<sup>1.</sup> DC coupling required to meet specifications below 50 MHz. With AC coupling, specifications apply at frequencies of 50 MHz and higher. Statistical observations at 10 MHz with AC coupling show that most instruments meet the DC-coupled specifications, however, a small percentage of instruments are expected to have errors exceeding 0.5 dB at 10 MHz at the temperature extreme. The effect at 20 to 50 MHz is negligible but not warranted.

<sup>1.</sup> DC coupling required to meet specifications below 50 MHz. With AC coupling, specifications apply at frequencies of 50 MHz and higher. Statistical observations at 10 MHz with AC coupling show that most instruments meet the DC-coupled specifications, however, a small percentage of instruments are expected to have errors exceeding 0.5 dB at 10 MHz at the temperature extreme. The effect at 20 to 50 MHz is negligible but not warranted.

Typical Indicated Noise including NFE = Typical DANL+ Bandwidth and Log corrrections-DANL improvement with NFE.
 No NFE factor at this frequency.
 Specified for instruments with prefixes MY/SG5213 or greater. Nominal for instruments with earlier prefixes.

### **General Specifications**

| Temperature range  |  |
|--|--|
| Operating  | 0 to 55 °C   |
| Storage  | −40 to 70 °C   |
| EMC  |  |
| Complies with European EMC Directive 2004/108/EC           |  |
| - IEC/EN 61326-2-1   |  |
| - CISPR Pub 11 Group 1, class B                            |  |
| - AS/NZS CISPR 11  |  |
| - ICES/NMB-001   |  |
| This ISM device complies with Canadian ICES-001            |  |
| Cet appareil ISM est conforme à la norme NMB-001 du Canada |  |
| Radio disturbance measuring apparatus                      |  |
| CISPR 16-1-1   | The features in this instrument comply with the performance requirements of this basic standard $^{\rm 1}$ |

Safety

Complies with European Low Voltage Directive 2006/95/EC

- IEC/EN 61010-1 2nd Edition
- Canada: CSA C22.2 No. 61010-01-04
- USA: UL 61010-1 2nd Edition

| Acoustic noise emission | Geraeuschemission   |
|-------------------------|---------------------|
| LpA < 70 dB             | LpA < 70 dB         |
| Operator position       | Am Arbeitsplatz     |
| Normal position         | Normaler Betrieb    |
| Per ISO 7779            | Nach DIN 45635 t.19 |

#### **Environmental stress**

Samples of this product have been type tested in accordance with the Keysight Environmental Test Manual and verified to be robust against the environmental stresses of storage, transportation, and end-use; those stresses include, but are not limited to, temperature, humidity, shock, vibration, altitude, and power line conditions; test methods are aligned with IEC 60068-2 and levels are similar to MIL-PRF-28800F Class 3

<sup>1.</sup> The use of Noise Floor Extension (NFE) is required to meet the "isolated pulse" test case in Bands B, C, and D. In addition, when making measurements in Band B below 160 kHz using time domain scans or making measurements using meters in monitor spectrum, NFE is also required to meet the 1 Hz pulse repetition frequency (prf) test case for the quasi-peak detector (QPD) and for the 5 Hz prf test case for the RMS-avg detector.

| Power requirements   |   |
|--|---|
| Voltage and frequency (nominal)                            | 100 to 120 V, 50/60/400 Hz                                    |
|  | 220 to 240 V, 50/60 Hz  |
| Power consumption  |   |
| – On   | 450 W maximum   |
| <ul><li>Standby</li></ul>                                  | 20 W  |
| Display  |   |
| Resolution   | 1024 x 768, XGA   |
| Size   | 213 mm (8.4 in.) diagonal (nominal)                           |
| Data storage   |   |
| Internal   | ≥ 80 GB (nominal) (removable solid state drive)               |
| External   | Supports USB 2.0 compatible memory devices                    |
| Weight (without options)                                   |   |
| Net  | 24 kg (52 lbs) (nominal)                                      |
| Shipping   | 36 kg (79 lbs) (nominal)                                      |
| Dimensions   |   |
| Height   | 177 mm (7.0 in)   |
| Width  | 431 mm (17.0 in)  |
| Length   | 535 mm (21.0 in)  |
| Calibration cycle  |   |
| The recommended calibration cycle is one year; calibration | ation services are available through Keysight service centers |

### I/Q Analyzer

### Resolution bandwidth (spectrum measurement)

Range

Overall
 Span = 1 MHz
 Span = 10 kHz
 Span = 10 kHz
 Span = 100 Hz
 Span = 100 Hz
 MHz to 10 kHz
 MHz to 100 Hz

#### Window shapes

Flat top, Uniform, Hanning, Gaussian, Blackman, Blackman-Harris, Kaiser Bessel (K-B 70 dB, K-B 90 dB and K-B 110 dB)

#### Analysis bandwidth

 Standard
 10 Hz to 10 MHz

 Option B25
 10 Hz to 25 MHz

 Option B85
 10 Hz to 85 MHz

#### IF frequency response (standard 10 MHz IF path)

IF frequency response (demodulation and FFT response relative to the center frequency, 20 to 30 °C)

| Center frequency (GHz) | Span (MHz) | Microwave preselector | Max. error | RMS (nominal) |
|------------------------|------------|-----------------------|------------|---------------|
| ≤ 3.6                  | ≤ 10       | NA                    | ± 0.40 dB  | 0.04 dB       |
| 3.6 < f ≤ 26.5         | ≤ 10       | On                    |            | 0.25 dB       |
| f > 26.5               | ≤ 10       | On                    |            | 0.35 dB       |

IF phase linearity (deviation from mean phase linearity, nominal)

| Center frequency (GHz)            | Span (MHz)   | Microwave preselector | Peak-to-peak (nominal) | RMS<br>(nominal)   |
|-----------------------------------|--------------|-----------------------|------------------------|--------------------|
| 0.02 < f ≤ 3.6<br>3.6 < f ≤ 26.5  | ≤ 10<br>≤ 10 | NA<br>On              | 0.4°<br>1.0°           | 0.1°<br>0.2° (nom) |
| Data acquisition (10 MHz IE noth) |              |                       |                        |                    |

#### Data acquisition (10 MHz IF path)

| Sample rate at ADC 100 MSa/s |  |
|------------------------------|--|
| ADC resolution 16 bits       |  |

### I/Q Analyzer - Option B25

### 25 MHz analysis bandwidth

| IF f  |                          |                       |                        |               |  |  |  |
