DEFINITIONS

- The specifications in the following pages describe the warranted performance of the instrument for $23 \pm 5^\circ\text{C}$ after a 30-minute warm-up period (unless otherwise stated).

Min/Max: Parameter range that is guaranteed by product design, and/or production tested. Warranted performance specifications include guard-bands to account for the expected statistical performance distribution, measurement uncertainties, and changes in performance due to environmental conditions.

Typical: Expected mean values, not warranted performance.

INTRODUCTION

- Very compact, portable, high dynamic range analogue signal generator model from 9 kHz to 6 GHz.**

The RFSG6H is a RF signal generators covering a continuous frequency range from 9 kHz up to 6 GHz with a 0.001 Hz resolution.

The RFSG6H provides an accurately levelled output power range and high spurious suppression. Advanced frequency synthesis with fractional-N divider makes for low SSB phase noise and micro-Hz resolution.

Available Options:

- Option PE3** is an optional power level extension to accurately level below -120 dBm.
- Option FS** substantially enhances the switching speed
- Option 1URM** modifies form-factor to a 19" rack-mountable 1HU enclosure
